Description

Description: As a user, I want to be able to create an account on the AutoKarma website (https://autokarma.ro). This feature will enable me to register on the platform, providing the necessary information, and subsequently use these credentials to log in for future visits.

Requirements:

1. **User Registration Form:**
   - The website should provide a user registration form accessible from the homepage or a dedicated registration page.
2. **Required Information:**
   - Users should be required to provide essential information during registration, including:
     - Full Name
     - Email Address (must be unique)
     - Adress
     - Password (with specific password complexity requirements)
     - Confirm Password
3. **Email Verification:**
   - After submitting the registration form, users should receive an email containing a verification link.
   - Users must click the verification link to activate their account.
4. **Password Complexity:**
   - The system should enforce password complexity rules (e.g., minimum length, combination of letters, numbers, and special characters).
5. **Registration Confirmation:**
   - Users should receive an on-screen confirmation message after successfully registering and verifying their email.
6. **Login Access:**
   - After successful registration and email verification, users should be able to log in to their newly created accounts.

Preconditions:

- The AutoKarma website (https://autokarma.ro) should be accessible and online
- Users should have access to a valid and unique email address for the registration and verification process.

Acceptance Criteria:

1. Users can access the user registration form on the AutoKarma website.
2. The registration form requires users to provide full name, a valid and unique email address, a password, and password confirmation.
3. Users must adhere to password complexity rules during registration.
4. Upon submitting the registration form, users receive an email containing a verification link.

5. Clicking the verification link successfully activates the user's account.
6. Users receive an on-screen confirmation message after successfully registering and verifying their email.
7. After registration and verification, users can log in to their accounts using their email and password.
8. The system should securely store user information and protect sensitive data during the registration process.
9. The website should be accessible and operational during the testing process.
